

FAVOUR RAYMOND JOSHUA

SOC Analyst | Cybersecurity Analyst | Blue & Red Team Practitioner

Lagos, Nigeria | +234 806 076 0916 | raymondjoshua004@gmail.com

LinkedIn: favour-raymond | GitHub: CyberRay007 | cyberray007.github.io/my-portfolio

PROFESSIONAL PROFILE

SOC-focused Cybersecurity Analyst with hands-on experience in threat detection, incident response, SIEM engineering, and both Blue Team and Red Team operations. Cisco-certified across multiple networking and cybersecurity domains, and holder of CompTIA CySA+. Demonstrated ability to build and operate enterprise-grade SOC home labs running Wazuh, Suricata IDS, and Active Directory simulations — including deploying custom detection rules, rootkit emulation, network intrusion detection pipelines, and structured incident response workflows. Additional hands-on experience in password cracking methodology, custom wordlist engineering, and John the Ripper rule authoring. Skilled full-stack developer capable of building security tooling from scratch. Passionate about protecting digital infrastructure.

CORE SOC & SECURITY COMPETENCIES

SOC Operations	Alert triage, threat hunting, incident response, escalation workflows
SIEM Engineering	Wazuh deployment, custom rule creation, log ingestion pipelines, dashboard tuning
Intrusion Detection	Suricata IDS, Emerging Threats ruleset, network traffic analysis
Threat Intelligence	IOC extraction, OSINT (VirusTotal, AbuseIPDB, Shodan, URLScan, MXToolbox), MITRE ATT&CK
Password Security	John the Ripper, custom wordlist engineering, leet speak rule authoring, MD5/hash cracking
Endpoint Security	File Integrity Monitoring (FIM), rootkit detection (Diamorphine LKM), EDR concepts
Network Security	pfSense firewall, VLAN segmentation, packet analysis (Wireshark, Nmap), IDS/IPS
Pen Testing	Burp Suite, Metasploit, Nmap, brute-force simulation, privilege escalation, lateral movement
Phishing / IR	Full OSINT phishing investigations, brand impersonation analysis, structured IR reports
Scripting & Dev	Python, JavaScript, TypeScript, Node.js — automation, tooling & API development
Soft Skills	Technical report writing, mentorship, Agile project management, stakeholder communication

SOC PROJECTS & LABS

Password Cracking Lab — Custom Wordlist, Leet Speak Rules & MD5 Hash Recovery

Personal Project (30-Day Cybersecurity Lab Series) | 2026

- Cracked MD5 password hashes using John the Ripper (Jumbo) against a challenge set of 13 hashes following a dinosaur-name password schema.
- Built a 50-entry domain-specific wordlist (dinosaurs.txt) from scratch, demonstrating targeted wordlist methodology over generic approaches.
- Authored a custom John the Ripper config (johnDemo.conf) with a hand-written [list.Rules:dinosaurs] rule set covering plain names, 4-digit year suffixes, and multi-character leet speak substitution chains (a→@, o→0, e→3).
- Recovered 4 of 13 hashes — including Tyr@nn0s@urus1988 (multi-leet + year) and Velocir@ptor2024 (leet + year) — at ~626,000 candidates/second.
- Produced a structured GitHub write-up with findings summary, methodology documentation, and defensive recommendations.

Incident Response: Phishing Email Investigation — OSINT & IOC Analysis

Personal Project (TSAcademy SOC Practice Series) | 2026

- Conducted a full end-to-end investigation of a real phishing email impersonating the Microsoft Security Team, producing a structured incident response report with all findings evidence-backed by tool screenshots.
- Extracted and analysed all IOCs using Have I Been Pwned, Hunter.io, WHOIS, MXToolbox, URLVoid, VirusTotal, URLScan.io, Shodan, and AbuseIPDB.
- Confirmed sender domain had no DMARC record and a misconfigured SPF policy; VirusTotal flagged the URL as Malicious (2/95 vendors); serving IP had 95 AbuseIPDB reports for phishing, spoofing, and spam.

- Mapped attack techniques to MITRE ATT&CK;: T1566.001 (Spearphishing Link), T1036 (Masquerading), T1027 (Obfuscation), T1204.001 (User Execution).

Wazuh SIEM + Suricata IDS + Rootkit Detection Homelab

Personal Project | 2026

- Designed and deployed a three-component cybersecurity homelab: Wazuh SIEM (Manager, Indexer, Dashboard), Suricata Network IDS, and kernel-level rootkit simulation using the Diamorphine LKM.
- Configured Wazuh on Kali Linux via Tailscale; enrolled Ubuntu endpoint as a monitored agent with centralised log collection and real-time alert visibility.
- Deployed Suricata with the full Emerging Threats open ruleset; integrated EVE JSON log output into the Wazuh agent pipeline and verified network traffic alerts in the Threat Hunting dashboard.
- Simulated a real-world kernel rootkit attack (Diamorphine), hiding rsyslogd using kill signals; Wazuh rootcheck successfully detected the hidden process within the configured scan interval.

SOC Home Lab — Enterprise-Grade Security Operations Centre Simulation

Personal Project | 2025 – Present

- Designed and deployed a structured multi-component SOC lab aligned to industry SOC workflows.
- Configured pfSense firewall rules with VLAN segmentation; deployed Windows Server with Active Directory, GPOs, and domain-joined endpoints.
- Built custom Wazuh SIEM detection rules and dashboards — detected over 200 brute-force login attempts within the first 48 hours; reduced false positive rate by ~35% through iterative rule tuning.
- Executed controlled attack simulations using Kali Linux — brute-force, privilege escalation, and lateral movement — correlating firewall, Windows Event, and endpoint telemetry.

Threat Intelligence Aggregation Platform

Personal Project | 2026 – Present

- Built a full-stack threat intelligence platform aggregating IOCs from open-source CTI feeds using automated Python ingestion pipelines.
- Developed a RESTful API backend (Node.js) and analyst-facing dashboard; applied MITRE ATT&CK; framework mappings to categorise detected threats and support triage workflows.

Password Strength Checker

Personal Project (GitHub: CyberRay007) | 2026

- Built a Python GUI tool that evaluates password strength (weak / medium / strong) in real time, reinforcing practical knowledge of password policy and entropy.

Phishing Link Scanner

Personal Project — Brainwave Matrix Solution (GitHub: CyberRay007) | 2025

- Developed a Python-based phishing link scanner that evaluates URLs and warns users if a link is dangerous, threatening, or safe — submitted as part of internship deliverables.

PROFESSIONAL EXPERIENCE

Software App Tester

Boredom Limited | 2026 – Present

- Conducted functional, regression, and exploratory testing across web and mobile applications; designed automated test scripts and documented bugs collaborating with development teams.

Cybersecurity Analyst & Ethical Hacker Intern

Brainwave Matrix Solutions | 2025

- Performed vulnerability assessments and penetration tests on simulated network environments; conducted phishing simulations and social engineering exercises as part of Red Team operations.
- Analysed security event logs and network traffic using SIEM tools; produced detailed technical reports with risk ratings and remediation recommendations.

Cybersecurity Analyst Intern

Redynox | 2025

- Monitored network infrastructure for suspicious activity; assisted in configuring and tuning IDS systems to reduce false positive rates; supported risk assessments and security policy documentation.

Academic Head & Student Mentor

Aptech Learning | 2024 – Present

- Mentored IT students in programming, networking, and cybersecurity; organised workshops on ethical hacking, networking fundamentals, and secure coding.

Project Manager

RentRight (Startup) | 2025 – Present

- Led cross-functional Agile development teams through sprint cycles; coordinated security reviews and data protection compliance measures.

Software Developer (Voluntary)

Elevation Church | 2025 – Present

- Developed and maintained the church web platform (HTML, CSS, JavaScript, Node.js); implemented secure data handling practices and regular security reviews.

Customer Care Agent

Access Bank PLC | 2023

- Resolved high-volume customer inquiries with strict adherence to data protection and confidentiality protocols.

CERTIFICATIONS

- CompTIA CySA+ (Cybersecurity Analyst+)
- Networking Basics — Cisco Networking Academy
- Networking Device and Initial Configuration — Cisco
- Network Addressing and Basic Troubleshooting — Cisco / Alison
- Network Support and Security — Cisco Networking Academy
- Network Technician Career Path — Cisco Networking Academy
- Introduction to Cybersecurity — Cisco Networking Academy

EDUCATION

B.Sc. Computer Science (In Progress)

National Open University of Nigeria | Ongoing

Focus areas: software engineering, networking, and information security. Complemented formal education with industry certifications and self-directed projects to build practical, employer-ready skills.

TECHNICAL SUMMARY

SIEM / Monitoring	Wazuh (Manager, Indexer, Dashboard, Agent), custom rule engineering, FIM
IDS / IPS	Suricata, Emerging Threats ruleset, EVE JSON log pipeline, alert triage
Threat Intelligence	VirusTotal, AbuseIPDB, Shodan, URLScan.io, MXToolbox, Have I Been Pwned, Hunter.io
Password Cracking	John the Ripper (Jumbo), custom wordlists, leet speak rule authoring, Raw-MD5
Pen Testing Tools	Burp Suite, Nmap, Wireshark, Metasploit (lab use), Diamorphine LKM
Network Security	pfSense, VLAN segmentation, firewall rule design, Active Directory, GPOs
Languages	Python, JavaScript, TypeScript, HTML5, CSS3
Frameworks	Node.js, Express.js, Git, GitHub
Concepts	MITRE ATT&CK, OWASP Top 10, Incident Response, IOC Analysis, Rootkit Detection
Platforms	Linux (Kali, Ubuntu), Windows Server, VirtualBox, Tailscale, Cloud (fundamentals)
CTF / Practice	TryHackMe, Hack The Box — active participant

ADDITIONAL INFORMATION

- Open to relocation to the UK; familiar with Skilled Worker visa sponsorship requirements.
- Active cybersecurity community member; continuously developing skills through CTF challenges on TryHackMe and Hack The Box.
